Overview

The strategy aims to generate income by constructing an actively managed investment portfolio of New Zealand bonds, deposits, and cash with the potential for capital gain from New Zealand dollar fixed interest markets.

Objective

The fund aims to outperform the benchmark return by 0.70% per annum before fees, expenses and taxes over a rolling three-year period.

Market Commentary

NZ bond returns were negative in February due to rising interest rates. Financial markets remained volatile as uncertainty escalated. The bond markets have been jostled by the “tug of war” between concern over inflation and rising cash rates versus heightened geopolitical concerns and the possibility of slower growth. Unfortunately, it looks like “there is still a fair amount of wood to chop” before the situation improves.

The NZ 2-year government bond finished 24 basis points higher, the 5-year finished 22 basis points higher, and the 10-year bond and 2051 government bond were 18 bps, and 13 bps higher in yield respectively. Swap rates widened slightly to governments which was unhelpful.

The bond fund has been positioned closer to benchmark duration as we have wanted to have less risk. Duration has varied between slightly short to slightly long since 2021 year-end and we have added some value as bonds have moved within the range. At the OCR update the RBNZ again increased their rate hike projections, and yields went higher on the day. Dare we say it, there is a lot priced in for higher interest rates in an uncertain world. The Reserve Bank sees neutral as around 2-2.5% but we question if cash rates above 3% should be priced in already.

Fund Commentary

The fund had a negative month as interest rates increased. It helped that we had reduced duration. Fund performance was in line with the Bloomberg NZ Bond Credit benchmark over the month. Credit holdings widened marginally as did swaps which was unhelpful for returns.

We have been reluctant to chase yield through investing in longer maturity bonds while both the swap and government curves have been so flat. We prefer to invest around 5 years in maturity and opportunistically seek to add some value when longer maturity bonds are cheap/expensive in the range. From a sector allocation perspective, we achieve a high yield from credit and holding inflation linked government bonds where appropriate. We have only participated in one new bond issue this year (Westpac 5 year at 3.7%) and have been awaiting the best opportunities as the risk is to a moderate widening in credit margins. Overall, our credit duration has reduced and a gradual recycle into new deals at better margins is our plan. With asset prices under pressure, we continue selling bonds that look expensive and switching into more defensive/liquid holdings.
