NIKKO AM NZ CORPORATE BOND STRATEGY

Assets are held in the Nikko AM Wholesale NZ Corporate Bond Fund. The Nikko AM NZ Corporate Bond Fund (retail) and Nikko AM KiwiSaver NZ Corporate Bond Fund invest in units in the wholesale fund, which the commentary refers to.

Market Overview

- NZ short term interest rates finished higher in yield following the RBNZ's 75bps rate hike.
- The NZ swap yield curve has become more steeply inverted from 2 to 10 years signalling recession.
- NZ longer term rates followed the US lower in yield as the market has generally been caught shorter duration.

Fund Highlights

- The fund has a modest long duration position which was of benefit where rates moved lower.
- Swaps and credit played some catchup from last month and outperformed government bonds.
- Holding Kainga Ora (Housing NZ) bonds benefited from a contraction in margins.

Overview

The strategy aims to generate income by constructing an actively managed investment portfolio of New Zealand bonds, deposits, and cash with the potential for capital gain from New Zealand dollar fixed interest markets.

Objective

The fund aims to outperform the benchmark return by 0.70% per annum before fees, expenses and taxes over a rolling three-year period.

Market Commentary

NZ bond returns were positive for the month. Longer maturity bonds performed better than shorter maturities. Swap was the best performing sector, and this flowed through to a better performance from credit, making up for some underperformance versus government bonds from the previous month

In terms of positioning, the fund has a modest long duration position which was helpful as the yield curve continued to invert as short-term yields moved higher after a hawkish RBNZ, while longer term rates moved lower pricing in an increased likelihood of recession. Changes in interest rates were: the 1- year government bond yield finished 31 basis points higher, the 2-year 40 bps higher, the 5-year 5 bps higher and the 10-year bond and 2051 government bond were 10 bps, and 16 bps lower in yield respectively.

Across sectors we continue to hold more high-quality credit bonds and less government bonds as we believe the additional yield will continue to benefit performance over the medium term. (For example, AAA rated LGFA 2027 bonds yield approximately 1% higher and AA rated NZ bank 1.5% above 5-year government bonds). NZ credit margins have remained relatively stable and with year-end fast approaching there will likely be a shortage of new issuance which should be supportive until supply resumes in the new year. Of note in credit, Kainga Ora (Housing NZ) bonds had a strong performance as margins contracted following the government taking over their debt program.

A higher terminal cash rate around 5%-5.5% looks likely as there has been little improvement in inflation, the labour market, and the things the RBNZ is most concerned about. The front end of the yield curve is pricing a higher OCR and the longer end is pricing recession. How long short rates need to remain elevated is uncertain, and the fate of longer-term bond rates are likely to remain much more heavily influenced by offshore direction.

Fund Commentary

The fund had a positive return as short-term yields finished the month higher and long term yields lower. Performance was marginally in line Bloomberg NZ Corporate Bond benchmark. The longer duration position was of benefit over the month. On sector allocation, swap and credit holdings outperformed Government bonds.

The fund continues to maintain a higher yield from holding credit issues and inflation linked government bonds in preference to lower yielding nominal government bonds, and we continue to believe this should benefit returns over the medium term.
